

Installing your Bass/Cello Clip

Start by removing the suction cup (See Video as well). Remove the two lid screws and loosen the black hex nut on the bottom floor of the preamp module and twist off the suction cup. Remove the black hex nut all together.

Using the VHB two sided tape, peel and place on the flat side of the Bass/Cello clip as shown and stick to the bottom of the preamp control model. Note: you may remove and re-stick a times to get the right placement if necessary.

Open the clip and place the self-adhesive rubber padding where needed to protect your instrument.
