

SADDLE CLIP ASSEMBLY

Using a flathead screwdriver as a **third hand**, open the jaws of the Saddle Clip.

With the jaws of the Saddle Clip locked open with a flathead screw driver, lay the cork or rubber pad onto the top and bottom of the rounded jaws of the Saddle Clip.

Remove the flathead screw driver from the Saddle Clip.
Using your fingers, open the jaws of the Saddle Clip.
Secure it onto your instrument at the desired location.
Nestle the Feather Micro Gooseneck in the saddle and you are ready to play!

SUCTION-MINI ASSEMBLY

Your Feather includes a suction-mini, a washer and an acorn nut.
Slip the washer on the threaded stud of the suction-mini & thread the acorn nut 1/2 turn.

Rest the stiff area of the Feather Gooseneck between the suction-mini and the washer.
Wrap the Feather Gooseneck around the stud of the suction mini, forming a u-shape.
Tighten the acorn nut snugly, holding the Feather Gooseneck in place.

With the acorn nut snug, straighten and stretch out the Feather Gooseneck.
Adjust to the sweet spot of your instrument.
